Powerhouse® Pro Head CC Kits

Premier tool manufacturer offers kits with everything needed to CC cylinder heads

Pro Head CC Kits from Powerhouse® provide everything you need to easily and accurately CC cylinder head combustion chambers, intake and exhaust runners, intake manifolds and cylinders.

Powerhouse® Pro Head CC Kits are available in 50cc, 100cc, 125cc and 250cc versions to suit any engine builder's needs. And unlike other CC kits on the market, the included scale actually reads out the amount poured, eliminating accidental math errors. Simply use the kit to fill the cylinder head combustion chamber and then read the amount poured out of the buret. It's as simple as that, and you have your CC measurement.

Precision glass burets are compatible with alcohol, parts washer fluid or virtually any liquid you may choose to use. All kits contain a precision glass buret with integral petcock, stand and clamp assembly, flat Plexiglas plate to cover the combustion chamber and step-by-step instructions on how to easily and properly CC cylinder heads. Scales are marked off in .1cc, .2cc or 1cc increments, depending on model. Replacement parts are also available for purchase.

For more information about the Powerhouse® Pro Head CC Kits, call us at 1-800-872-7223, or visit us online at www.powerhouseproducts.com.

Part #POW351160

Quick Summary
